Bhargav Singapuri

Data Scientist | Seeking Summer 2026 Internship | Available May – August 2026
(617) 906-3719 | jobs@bhargav.io | linkedin.com/in/bhargav-singapuri | github.com/majulahsingapuri

PROFESSIONAL SUMMARY

Data scientist with production experience across finance and healthcare building analytics dashboards, ETL pipelines, and ML models. Processed 10M+ daily API records at UOB (incident diagnosis: 10 hours → 10 seconds), ingested 1M+ investment records via Airflow/Snowflake at Vertex Holdings, and achieved 99% accuracy on cancer cell classification with uncertainty quantification. Strong in SQL, Pandas, statistical modeling, and data visualization.

EDUCATION

Northeastern University — **Boston, MA**
Master of Science in Artificial Intelligence | GPA: 3.83 — *September 2024 – December 2026 (Expected)*

Nanyang Technological University — **Singapore**
Bachelor of Science in Data Science and Artificial Intelligence | GPA: 3.73 — *August 2019 – July 2023*

SKILLS

Data & Analytics	SQL (PostgreSQL, Snowflake), Pandas, NumPy, Airflow, Tableau, Excel (PowerQuery & Pivot Tables)
ML/AI Frameworks	PyTorch, TensorFlow, Keras, scikit-learn, Hugging Face Transformers, LangChain, OpenCV, TransformerLens, SAELens
MLOps & Deployment	Docker, LangSmith, Terraform, Airflow, REST APIs, CI/CD Pipelines
Cloud & Infrastructure	AWS, Google Cloud Platform (GCP), Azure
Programming & Tools	Python, Shell Scripting, Git, Linux/UNIX, CI/CD
Specialisations	Natural Language Processing (LLMs, RAG, Prompt Engineering, Agents), Computer Vision (CNNs, ViTs), Model Interpretability, Monte-Carlo Simulation, Data Visualization

EXPERIENCE

United Overseas Bank — **Singapore**
Data Engineer — *July 2023 – August 2024*
- **Dashboarding:** Spearheaded a Splunk dashboard visualizing TPS, latency, and HTTP statuses on 10M+ daily API records, cutting incident diagnosis time from 10 hours to 10 seconds
- **Infrastructure Reliability:** Collaborated with cross-functional teams to deliver database upgrades, ensuring minimal downtime and security of customer data

Vertex Holdings — **Singapore**
Data Science Intern — *December 2021 – April 2023*
- **Data Pipeline Engineering:** Developed Airflow ETL pipelines ingesting 1M+ relationship and investment records into Snowflake, creating a unified data layer that improved accessibility of investor intelligence for investment analysis and deal sourcing
- **Investor Relationship Platform:** Built a CRM that centralized data on investment and business-development opportunities, generating relationship graphs and a searchable knowledge base for investment managers to map investor networks and automatically log outreach, eliminating manual reconciliation and speeding up deal flow

Biogen — **Boston, MA**
Machine Learning Co-op — *July 2025 – December 2025*
- **Process Automation:** Designed and deployed an LLM-powered summarization system that extracts key points from pTRS meeting minutes and auto-generates leadership-specific 1-page briefs, cutting turnaround from 2 weeks to 2 minutes
- **Knowledge Deduplication:** Implemented ML pipelines to detect redundant SOPs via semantic clustering, reducing internal documentation load by 10%

PROJECTS

Cancer Cell Detection — *January 2025 – May 2025*
- Fine-tuned Vision Transformers on lung-cell imagery using PyTorch Lightning; achieved 99% accuracy / 0.99 F1
- Quantified uncertainty with Monte-Carlo Dropout to ensure reliability in clinical inference scenarios

Hidden in Plain Sight — *January 2026 – Present*
- Using Transliteration as an attack vector on Gemma 3 models to elicit harmful responses
- Building mitigation tools using linear probes and SAEs

Cross-coder Interpretability — *January 2026 – Present*
- Benchmarking Cross-coders as part of quiver of arrows in a practitioners' toolkit on binary decision datasets

JournalGPT — *September 2024 - October 2024*
- Created a Retrieval-Augmented Generation (RAG) pipeline via Flowise, enabling semantic querying of personal journal entries with conversational tone-matching
